

The RAD RaceRunner

A Running Bike for Ages 3 to 103

What is the RAD RaceRunner?

The RAD RaceRunner is a three-wheeled running bike with chest support. It is designed for children and adults with balance or mobility issues to achieve their exercising goals - be it recreation, competition, or rehabilitation.

Sitting on the saddle and leaning forward, a rider can engage her lower body to propel forward and experience the freedom to move.

What is RaceRunning?

Invented 30 years ago as an alternative to wheelchair racing for people with cerebral palsy, RaceRunning consists of runners competing in traditional track events using a RaceRunner frame.

Today, RaceRunning has evolved into more than just a competitive sport. Most runners are ordinary people looking to get exercise, walk to the store, or run with their friends and families.

Who can use a RAD RaceRunner?

Anybody with:

- Cerebral palsy
- Parkinson's disease
- Spina bifida
- Muscular dystrophy
- Multiple Sclerosis
- General muscle weakness
- Balance issues

Adjustable Everywhere

It's all about fit! 7 adjustable joints for tailoring the ride.

Light, Slim, Stable

At under 29 lbs, it's easy to carry. Angled for stability, the wheels fit standard tracks and sidewalks.

Self-Centering Handlebar

Counteracts lateral movement for one- or two-handed steering.

Customizable Chest-plate

Different sizes, styles and straps available.

Quick Release Wheels

Switch easily between racing tires for speed and optional all-purpose tires for stability.

Comfortable Saddle

Optional droplink allows for easy wheelchair access.
